

# Moving your Virtual Machines to oVirt with ease

Arik Hadas  
Senior Software Engineer  
Red Hat  
27/7/15

- Motivation
- Architecture
- Demonstration
- Implementation
- Known issues
- Future improvements

# Motivation

- There are many virtualization tools
- Different hypervisors
  - KVM, ESX/ESXi, Xen, VirtualBox, ...
- Different management systems
  - oVirt, virt-manager, vSphere, Ganeti, ...

- Virtualization technologies are used for a long time
- No standardization
- People are tied up to the technologies they currently use
- Conversion tools are needed!

- Part of virt tools
  - Open source virtualization management tools
- Foreign hypervisor -> KVM
- Standalone conversion tool

- Converts disk formats
- Enables VirtIO drivers (If needed)
  - Network, Storage
- Fixes boot-loader
- Produces full oVirt-compatible OVF
- Outputs the VM in oVirt's export domain

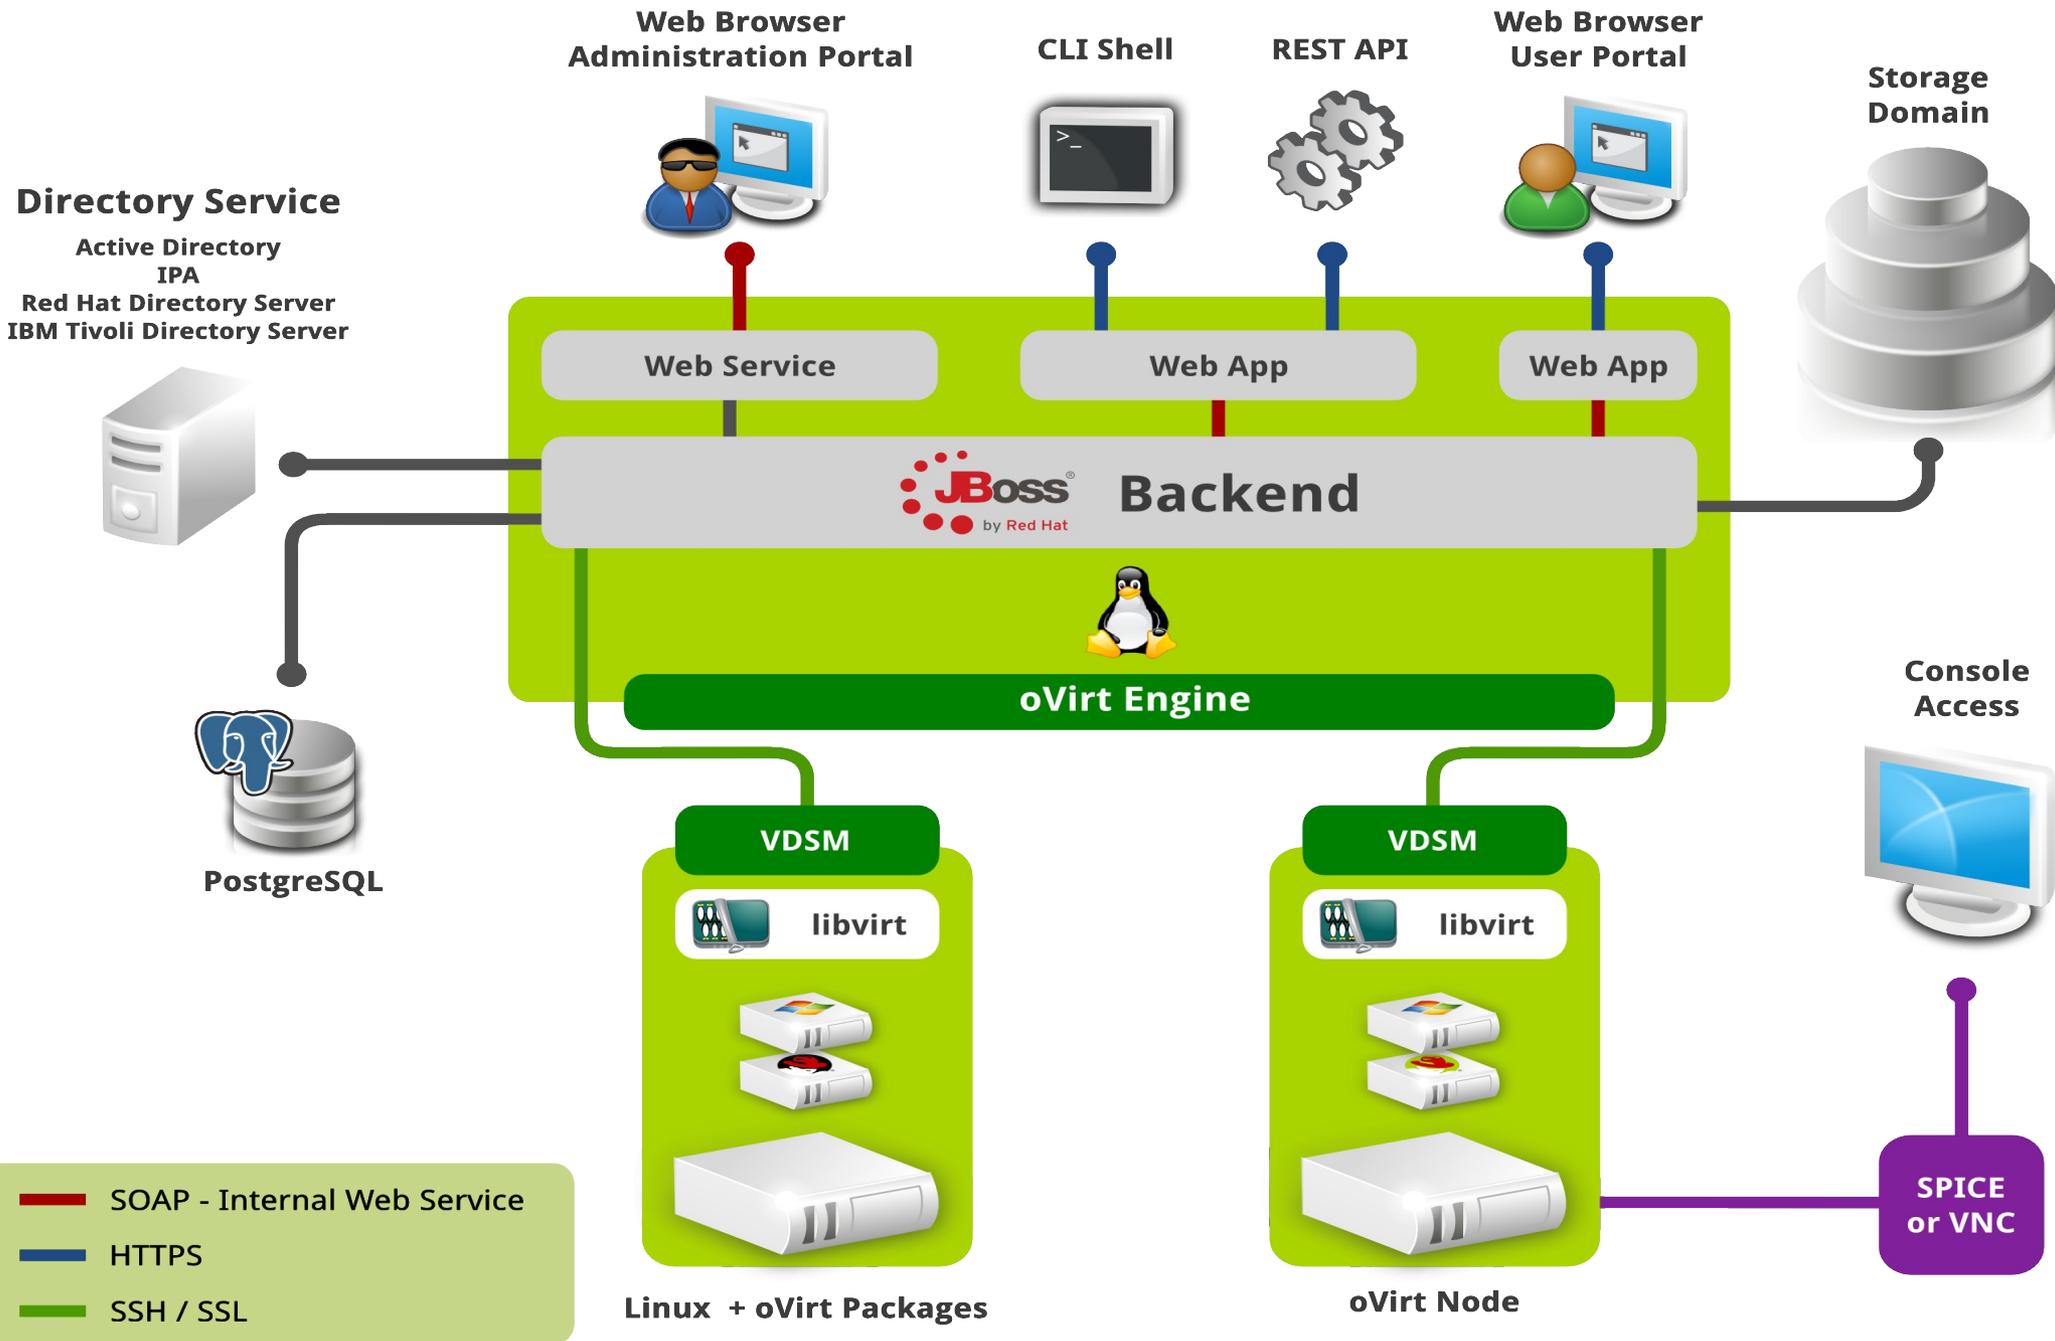

- Slow
- Tedious
- Error-prone
- Requires separate installation
- Do not support conversion of OVA files
- Error handling

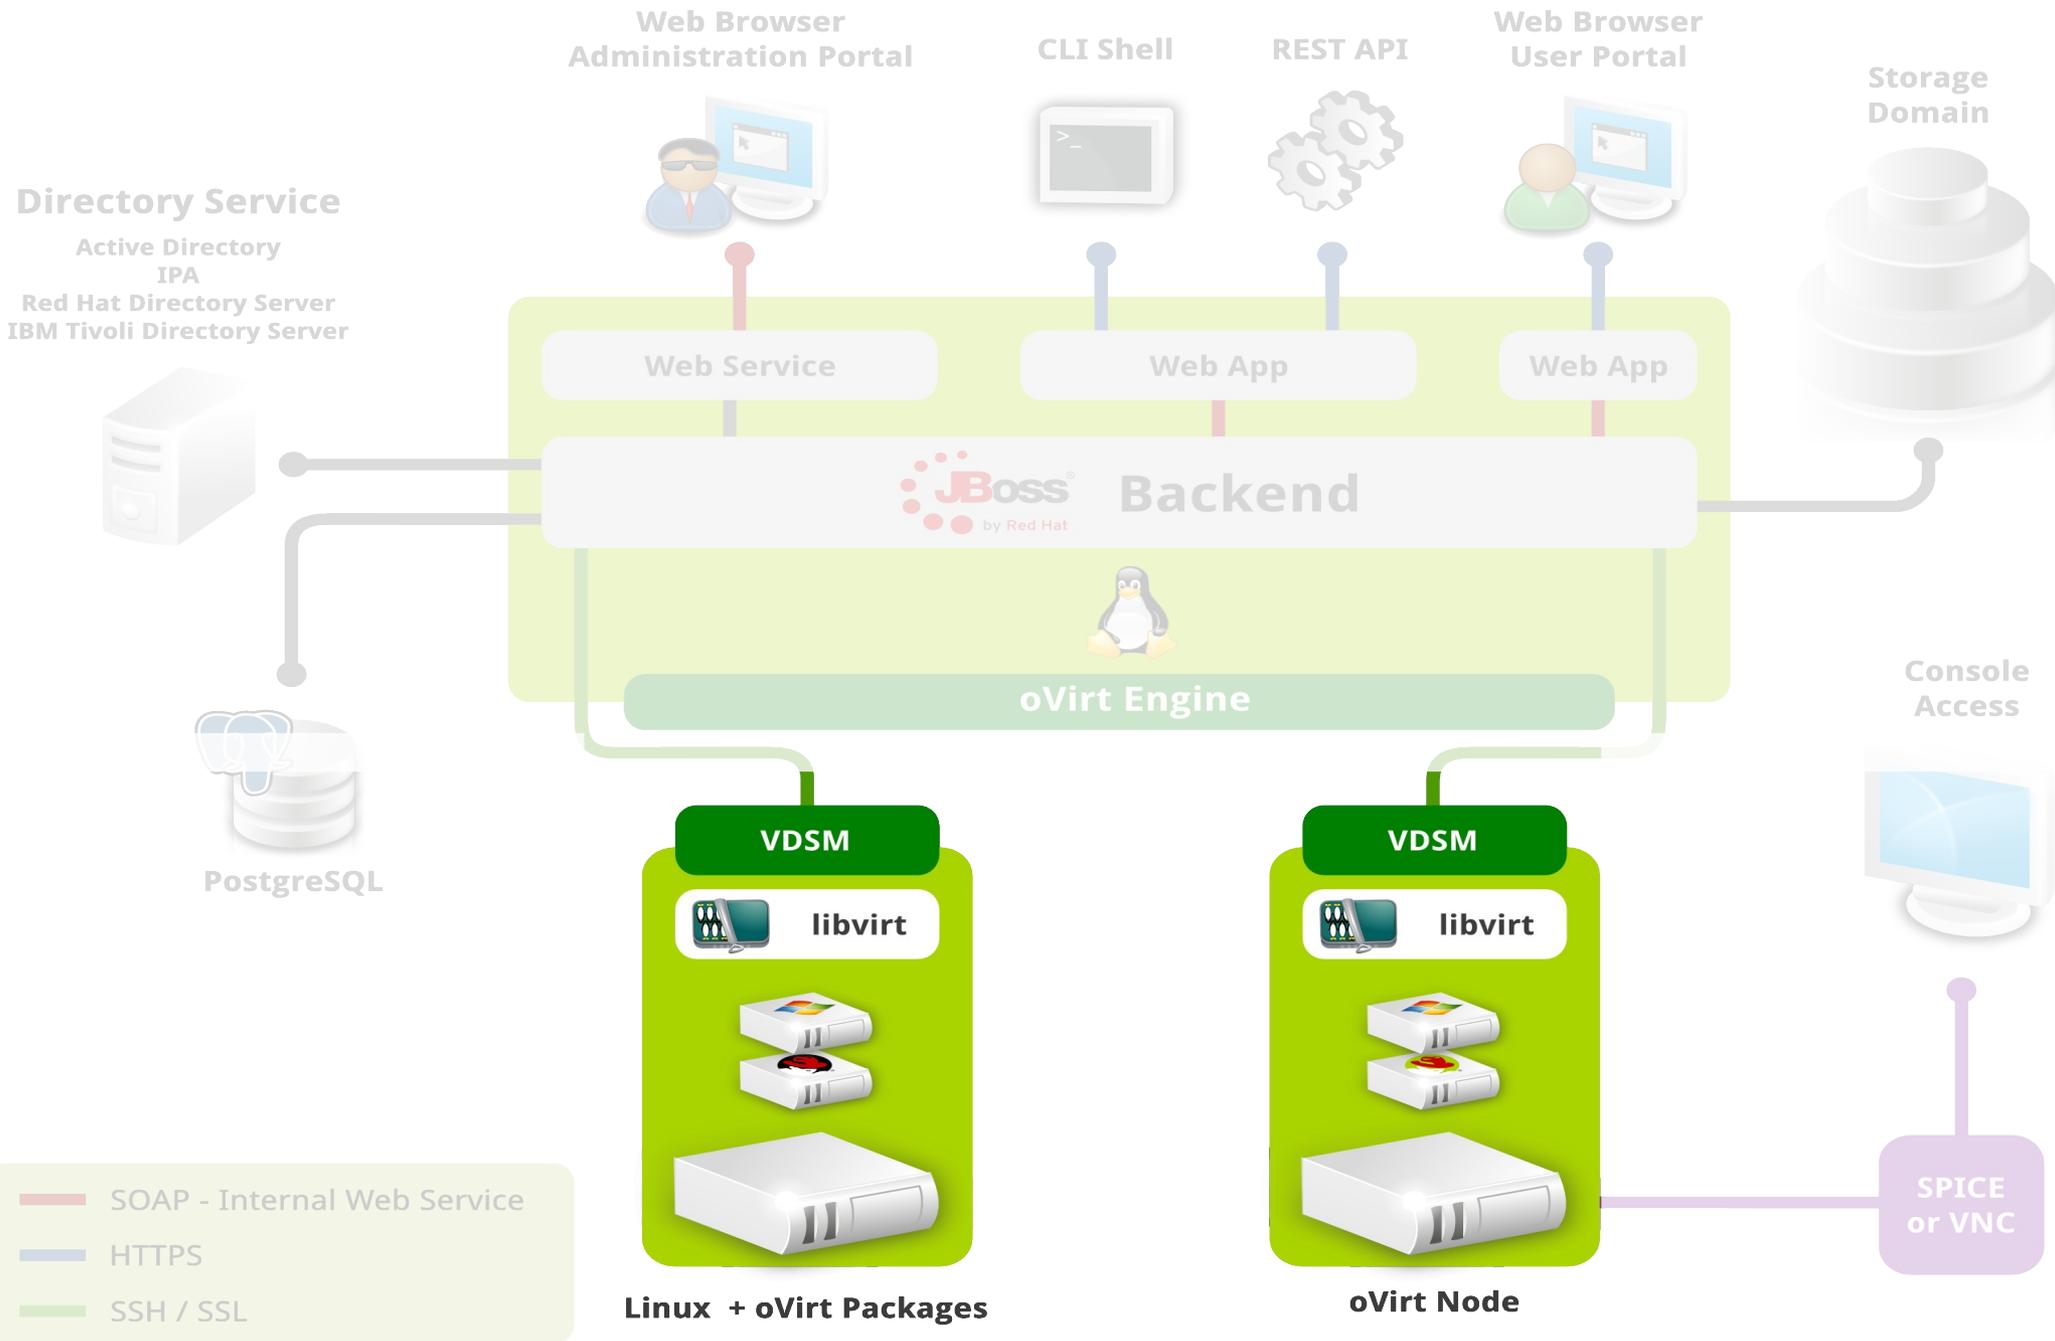

## Introduce better conversion process to oVirt

- Faster
- Tools are available
- Graphical user interface
  - To configure
  - To monitor/cancel
- Robust
- Support conversion of OVA files

# Architecture

- Use virt-v2v capabilities
  - Guest level operations
- Integrate virt-v2v with VDSM
- oVirt manages the conversion
  - Configure conversion properties in admin portal
  - Create disks
  - Monitor conversion progress
  - Cleanup on errors

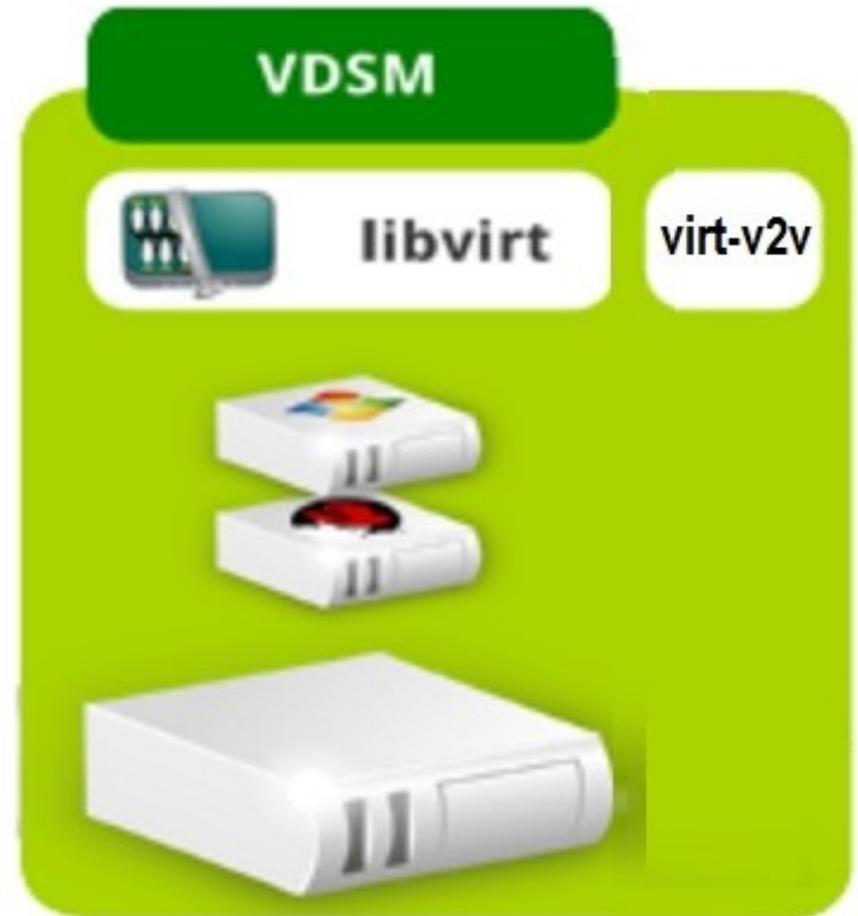

# oVirt How virt-v2v is integrated in oVirt?

# oVirt virt-v2v is installed on each host

List

```
graph TD; List([List]) -- VMs --> Selection[User selects the virtual machines to be imported and defines the conversion properties]; Selection -- Conversion properties --> Import([Import]);
```

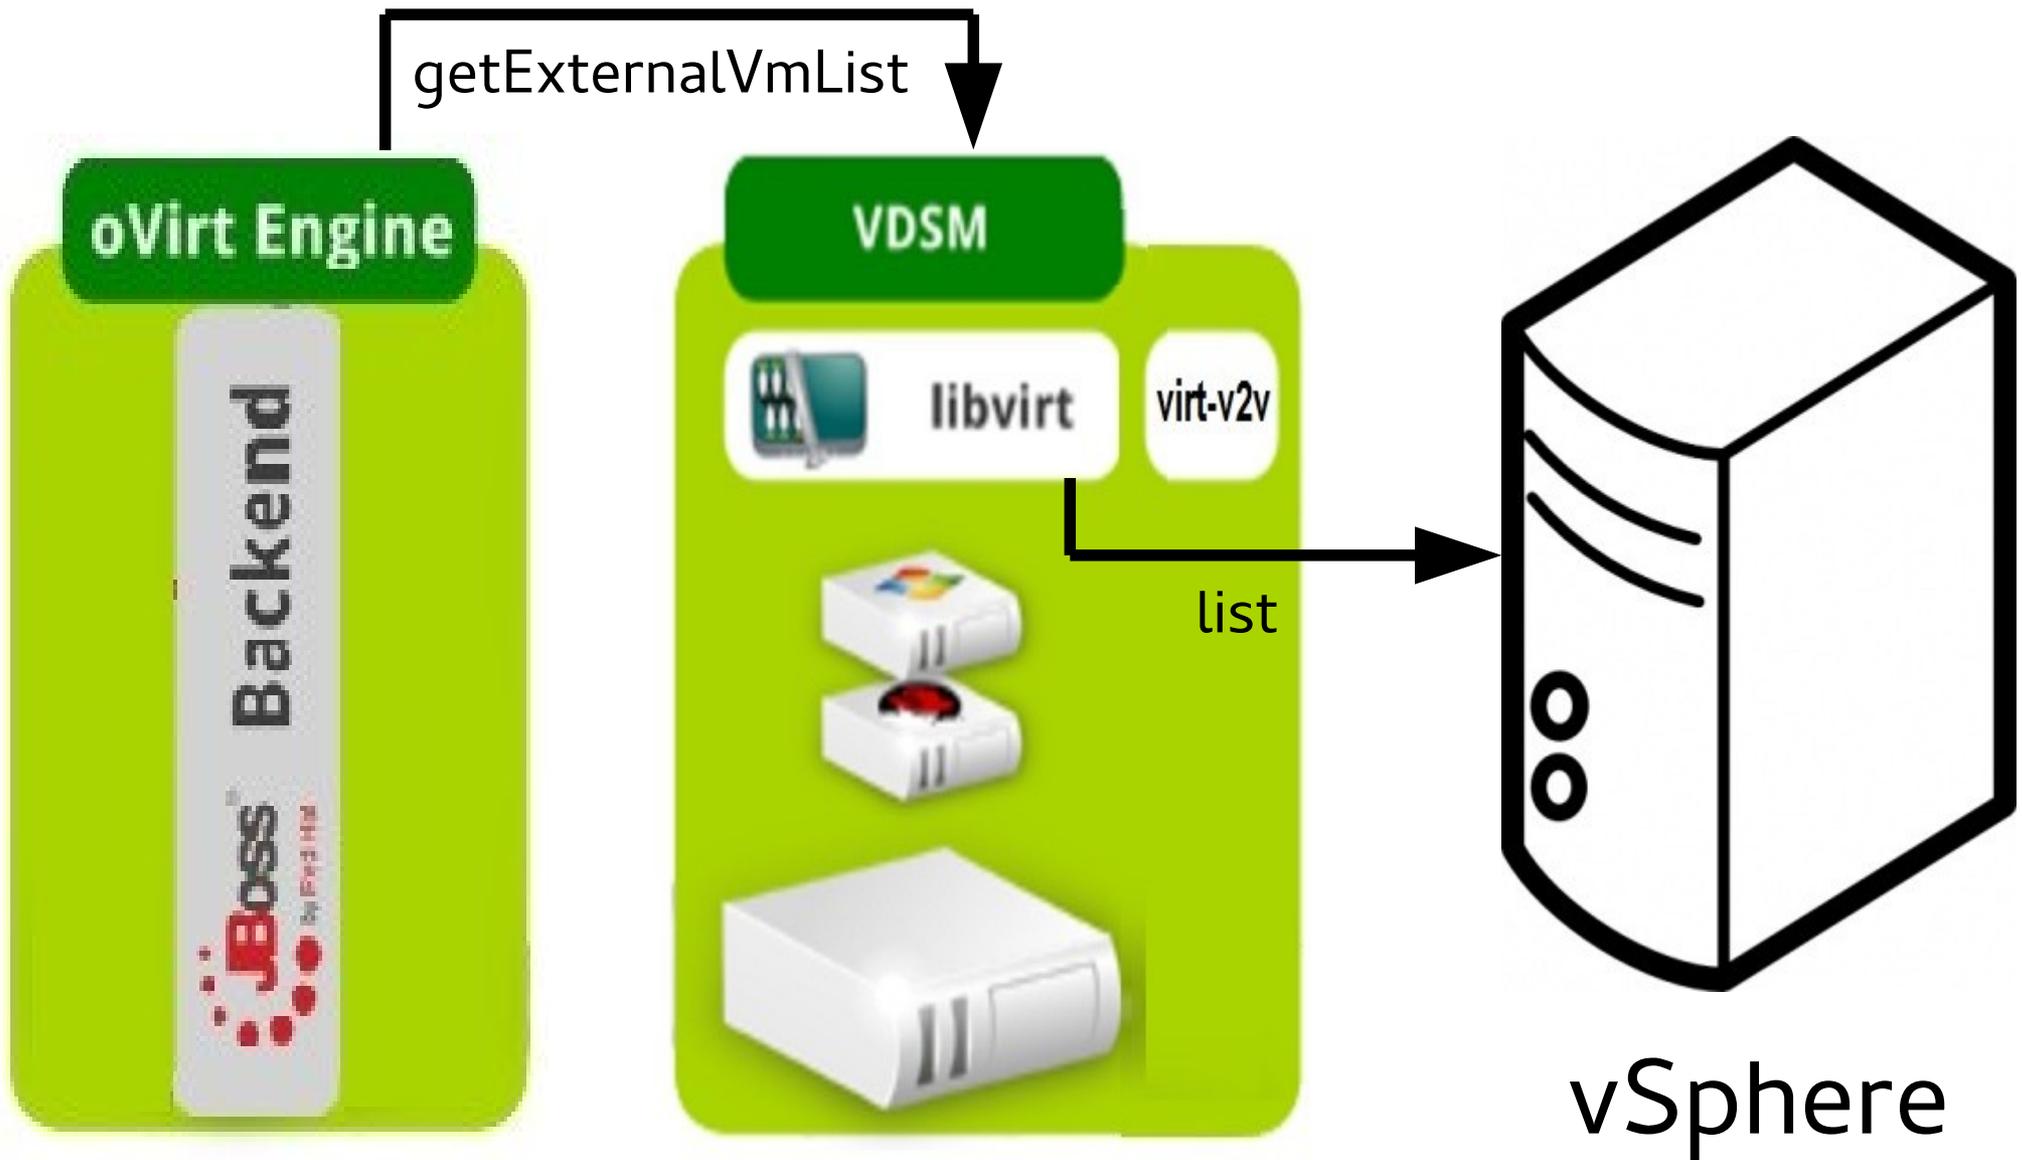

VMs

User selects the virtual machines to be imported and defines the conversion properties

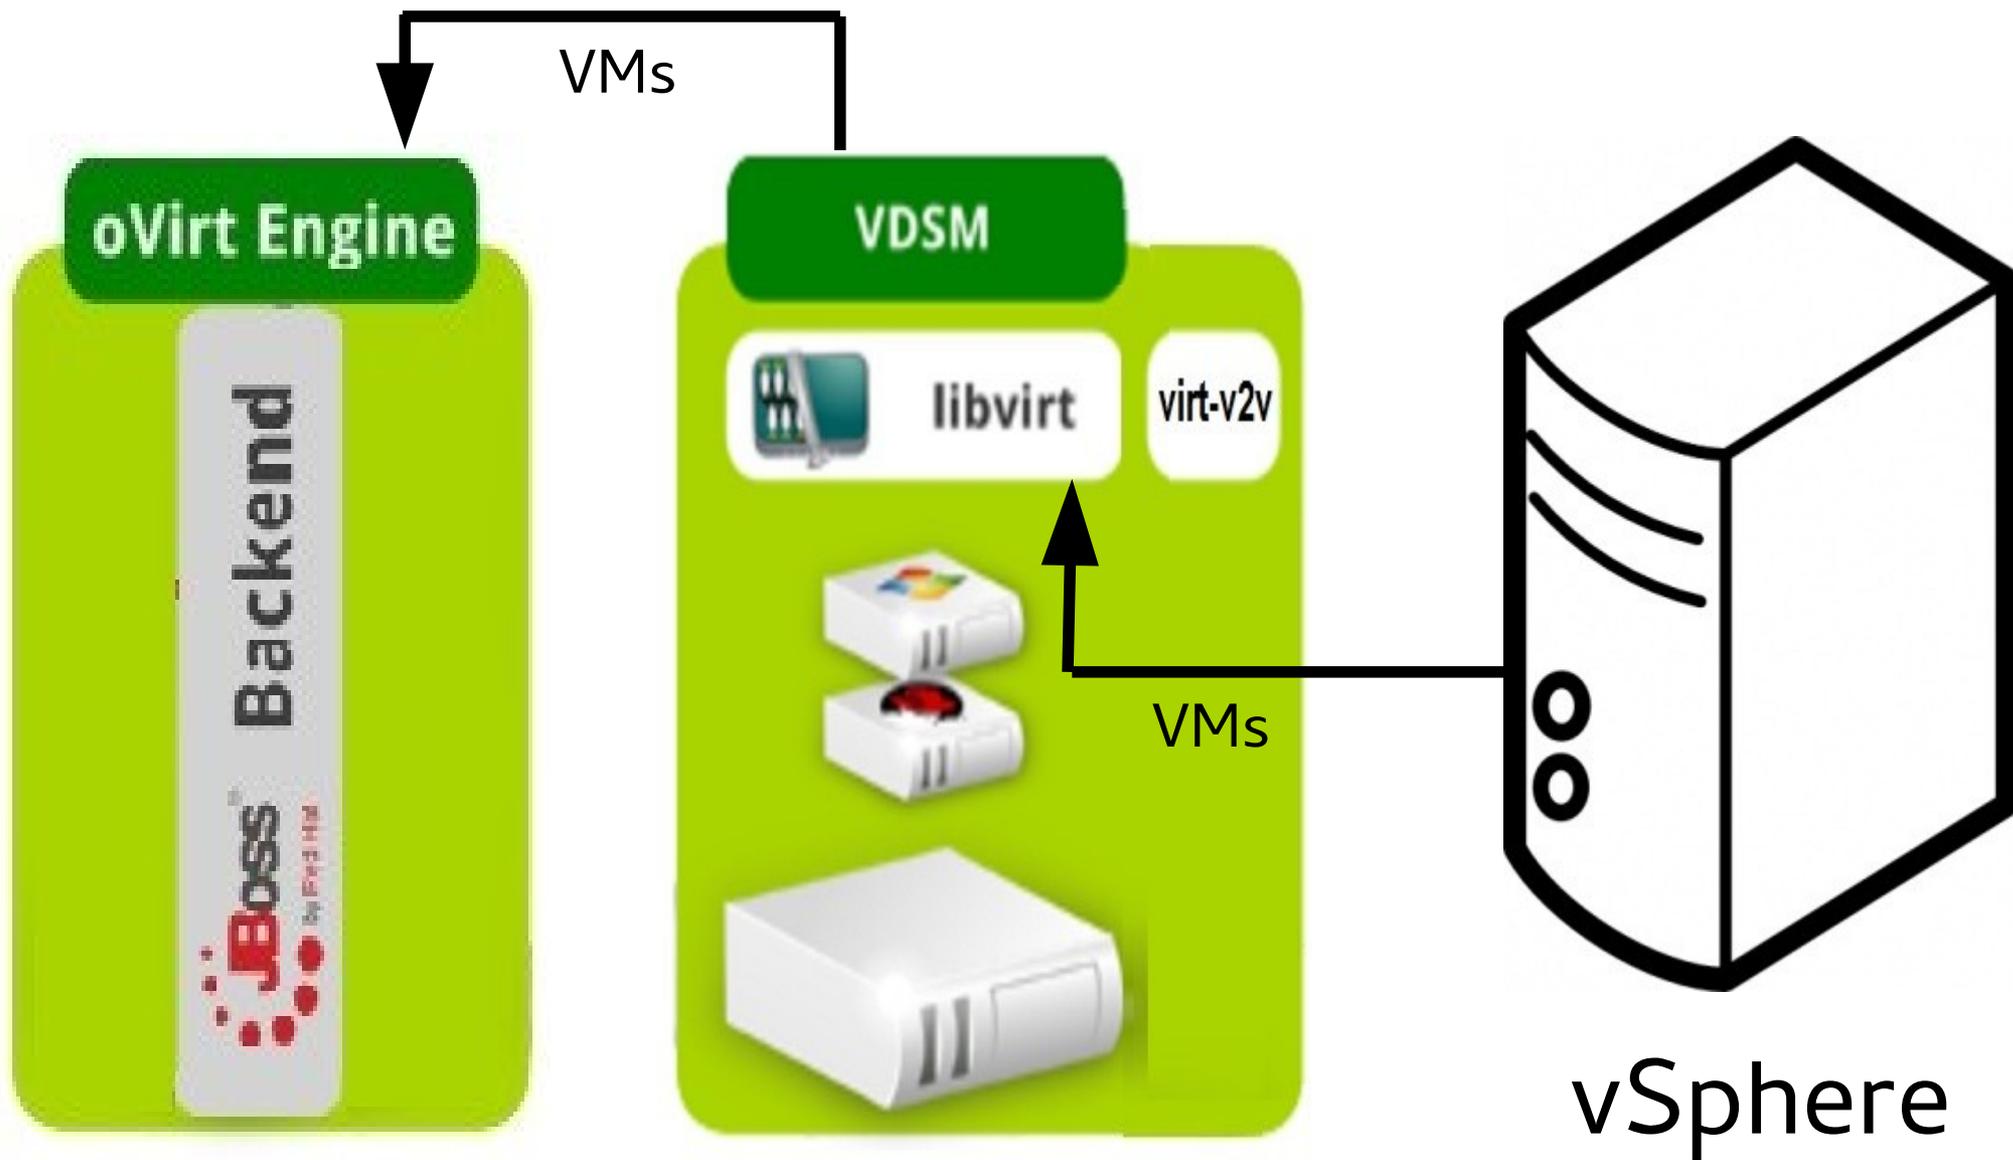

Conversion properties

Import

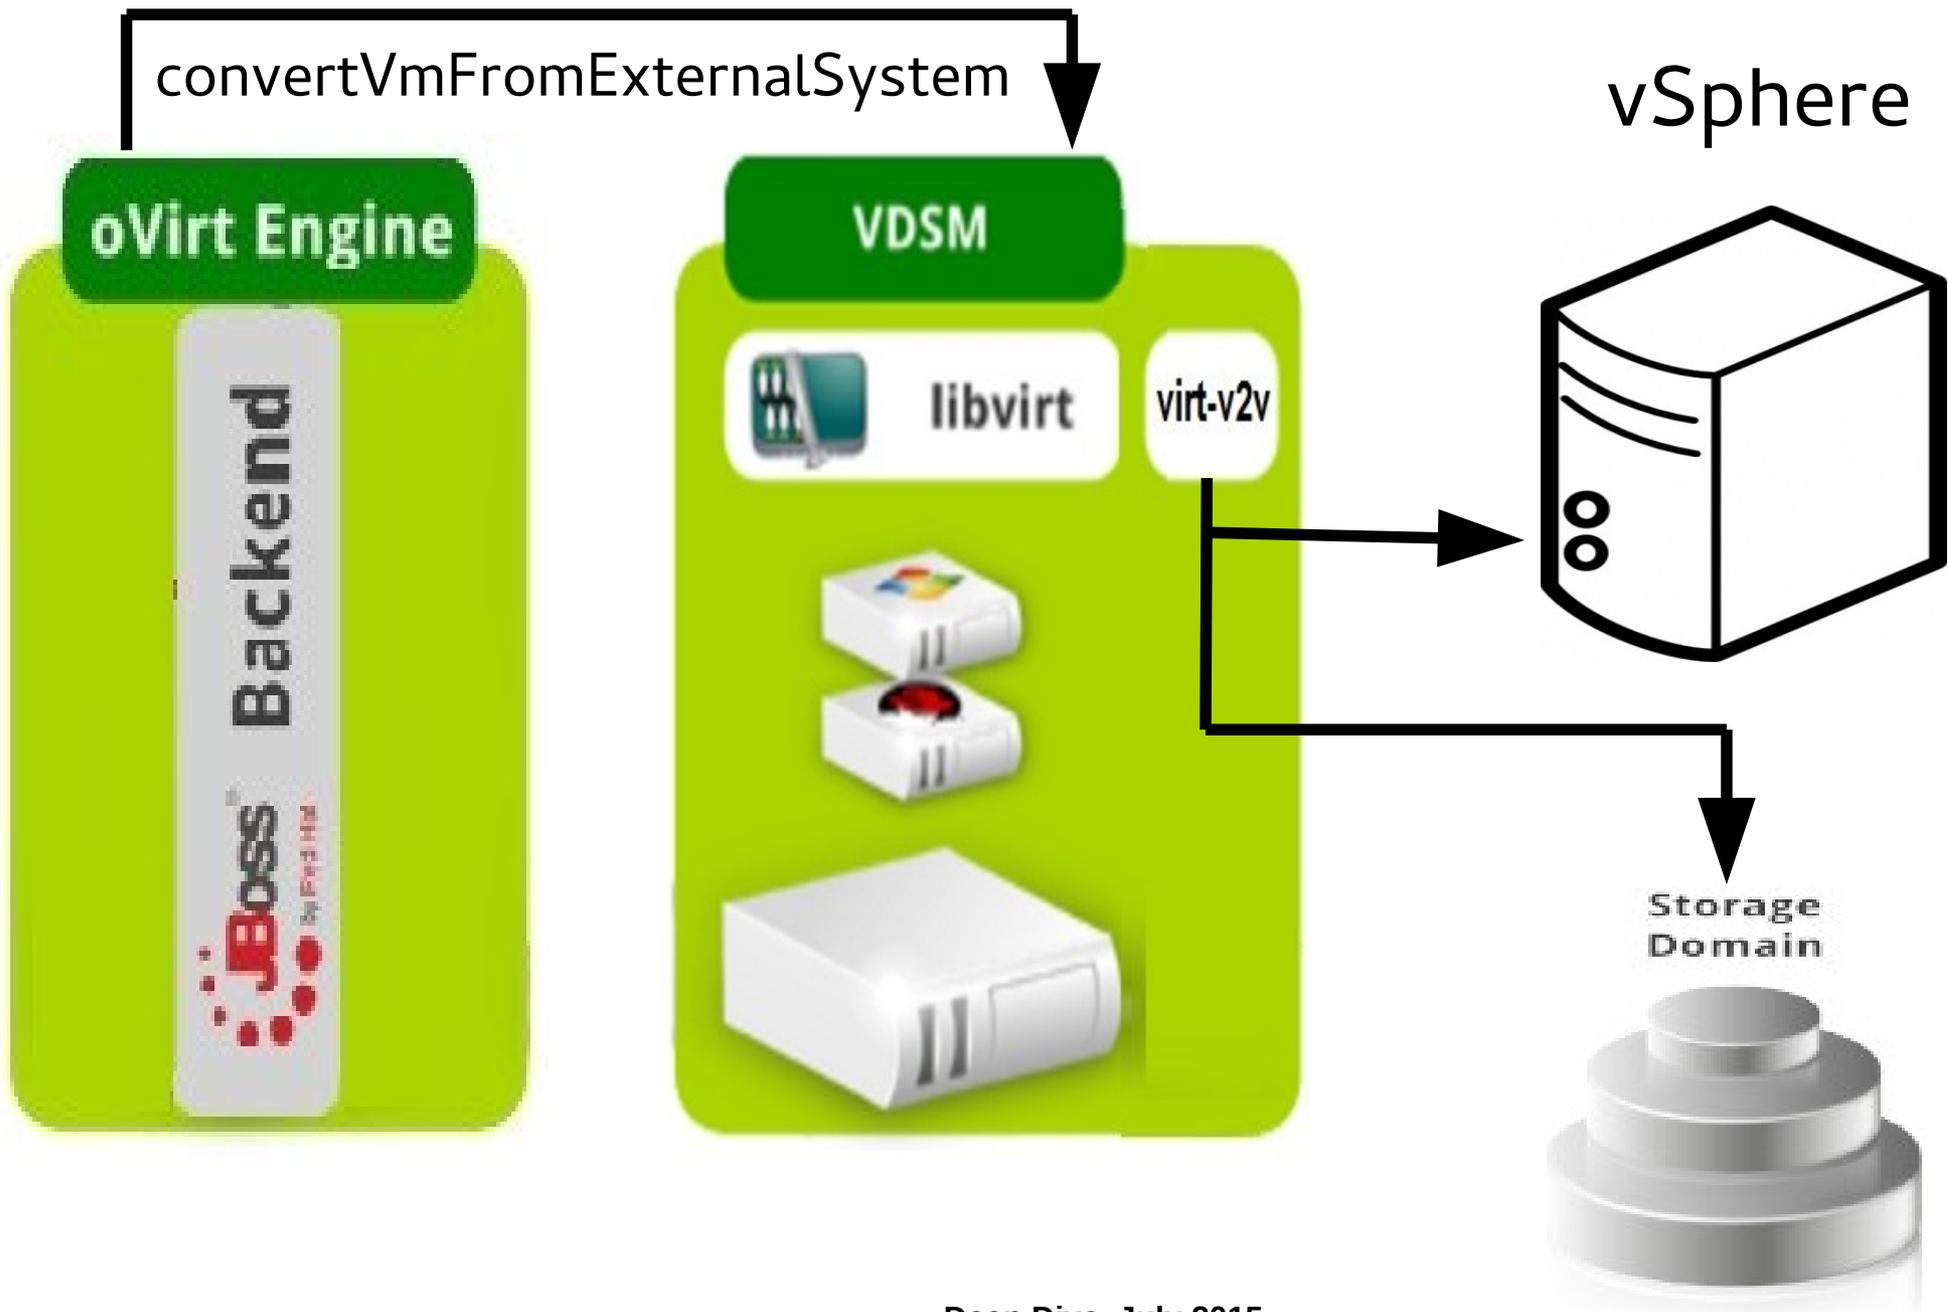

# List VMs from VMware (1)

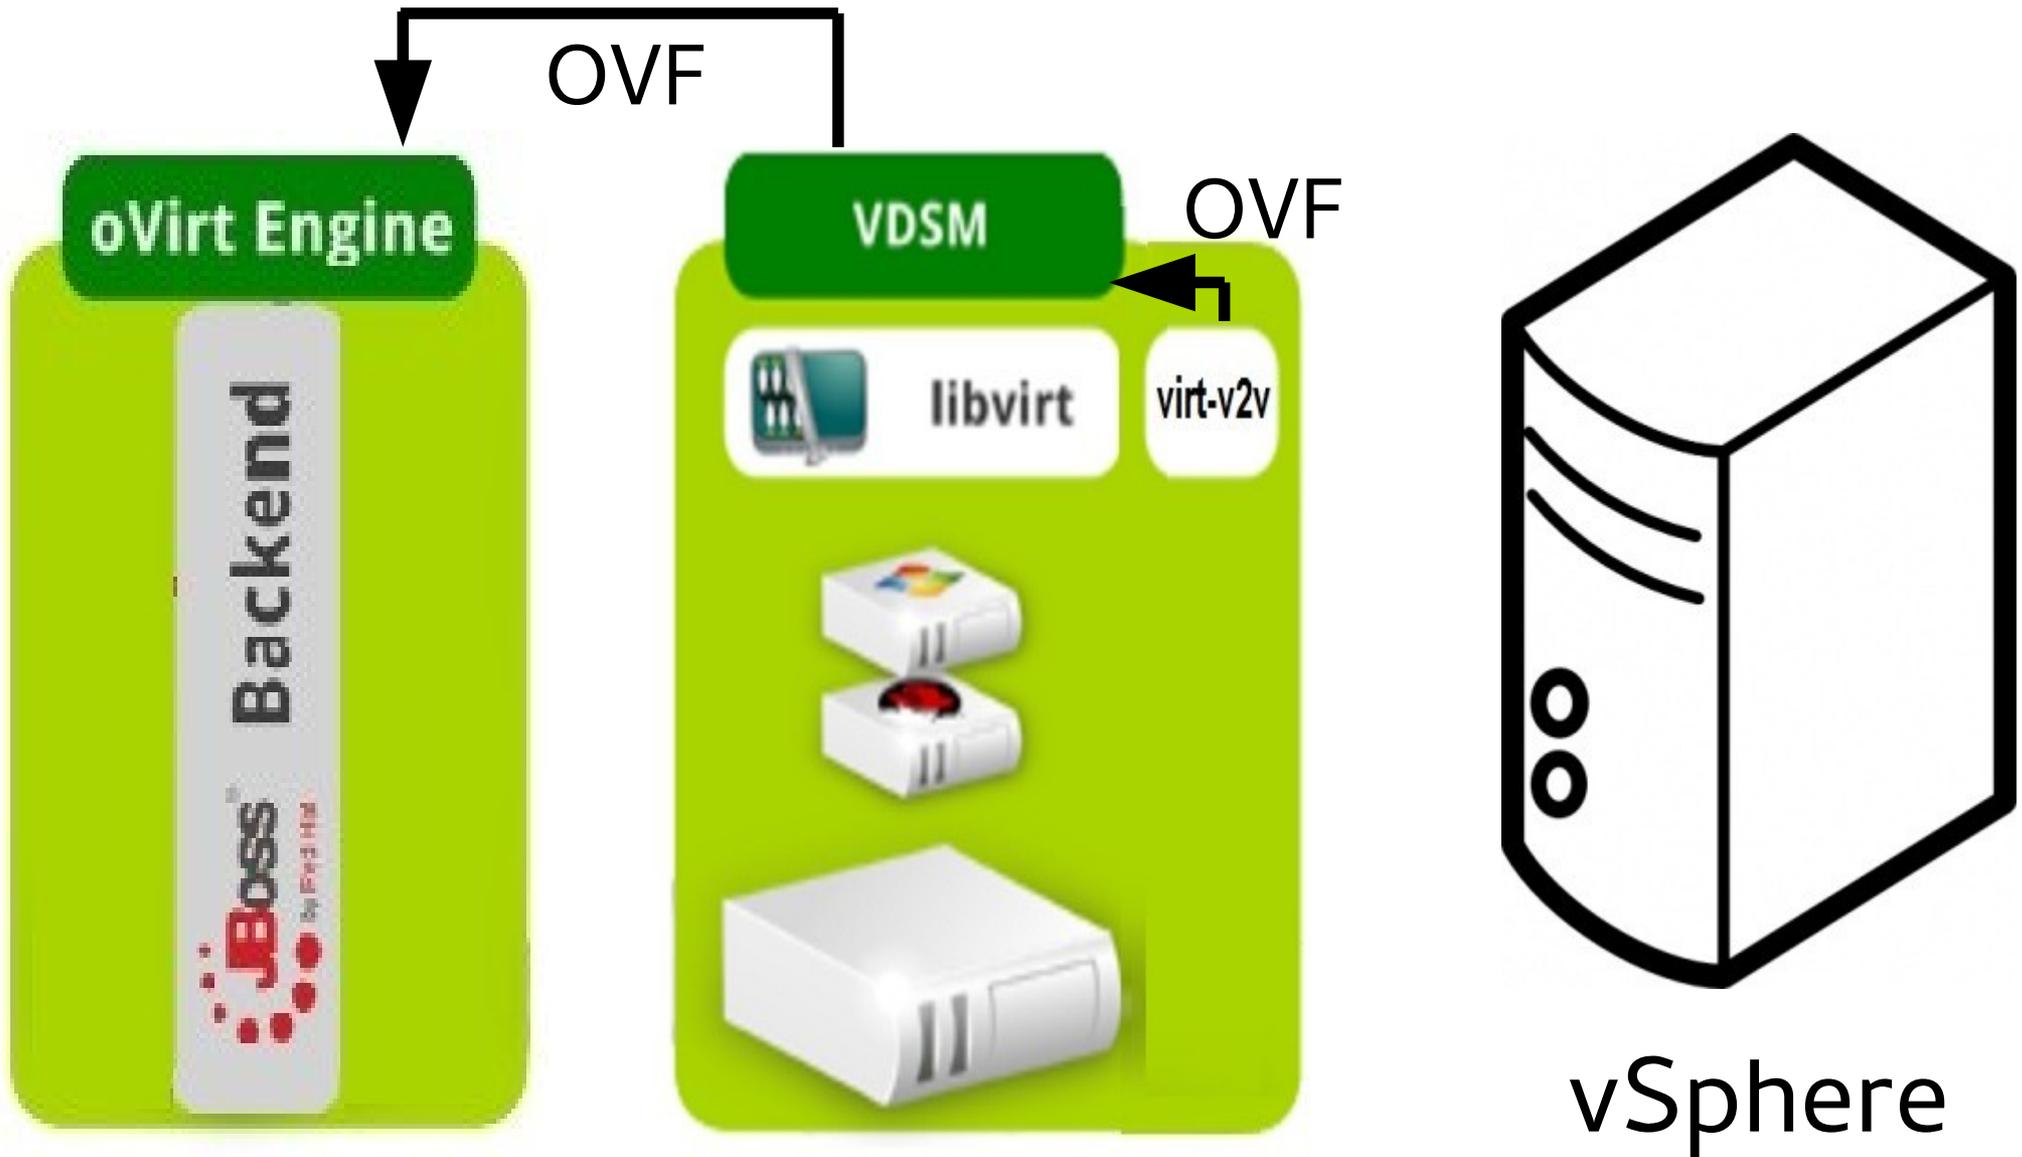

# List VMs from VMware (2)

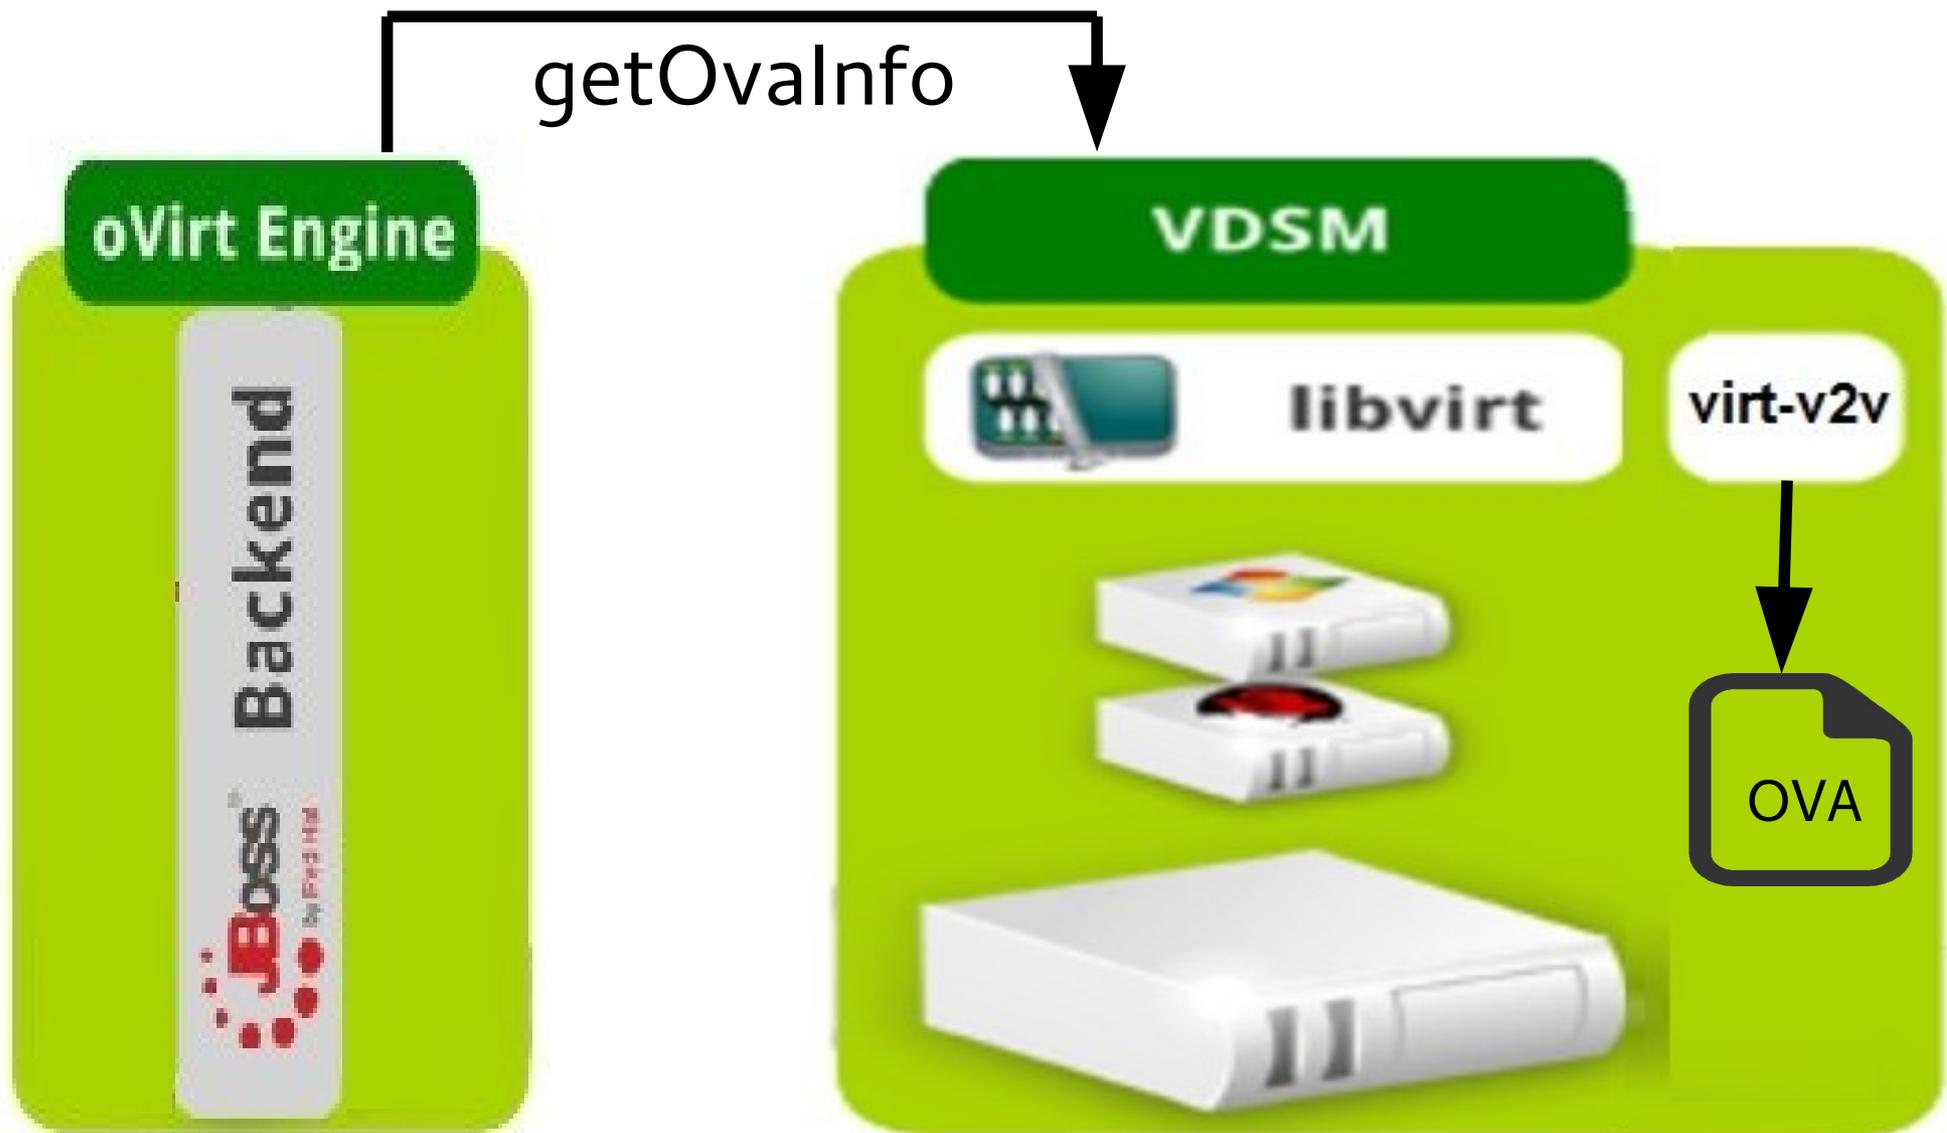

# Convert VM from VMware (1)

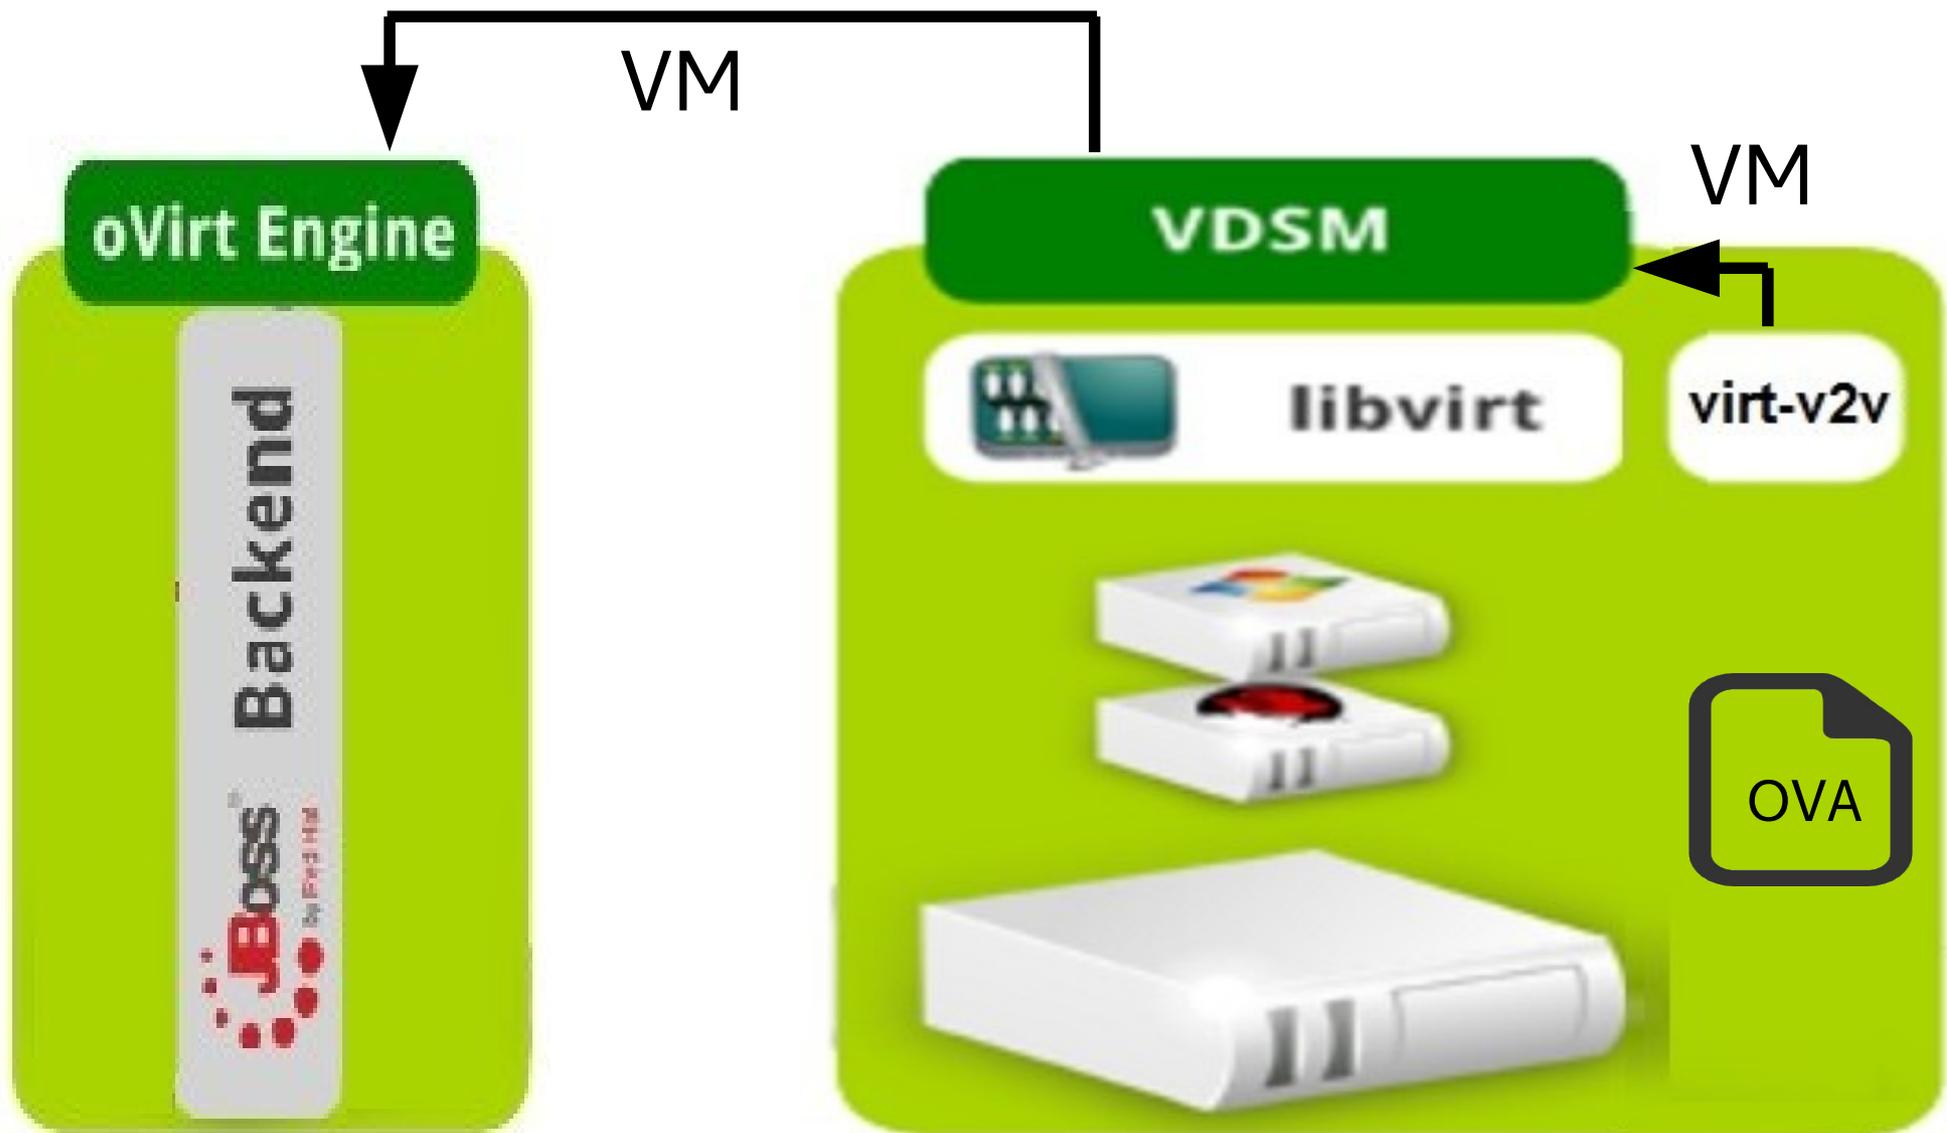

# Convert VM from VMware (2)

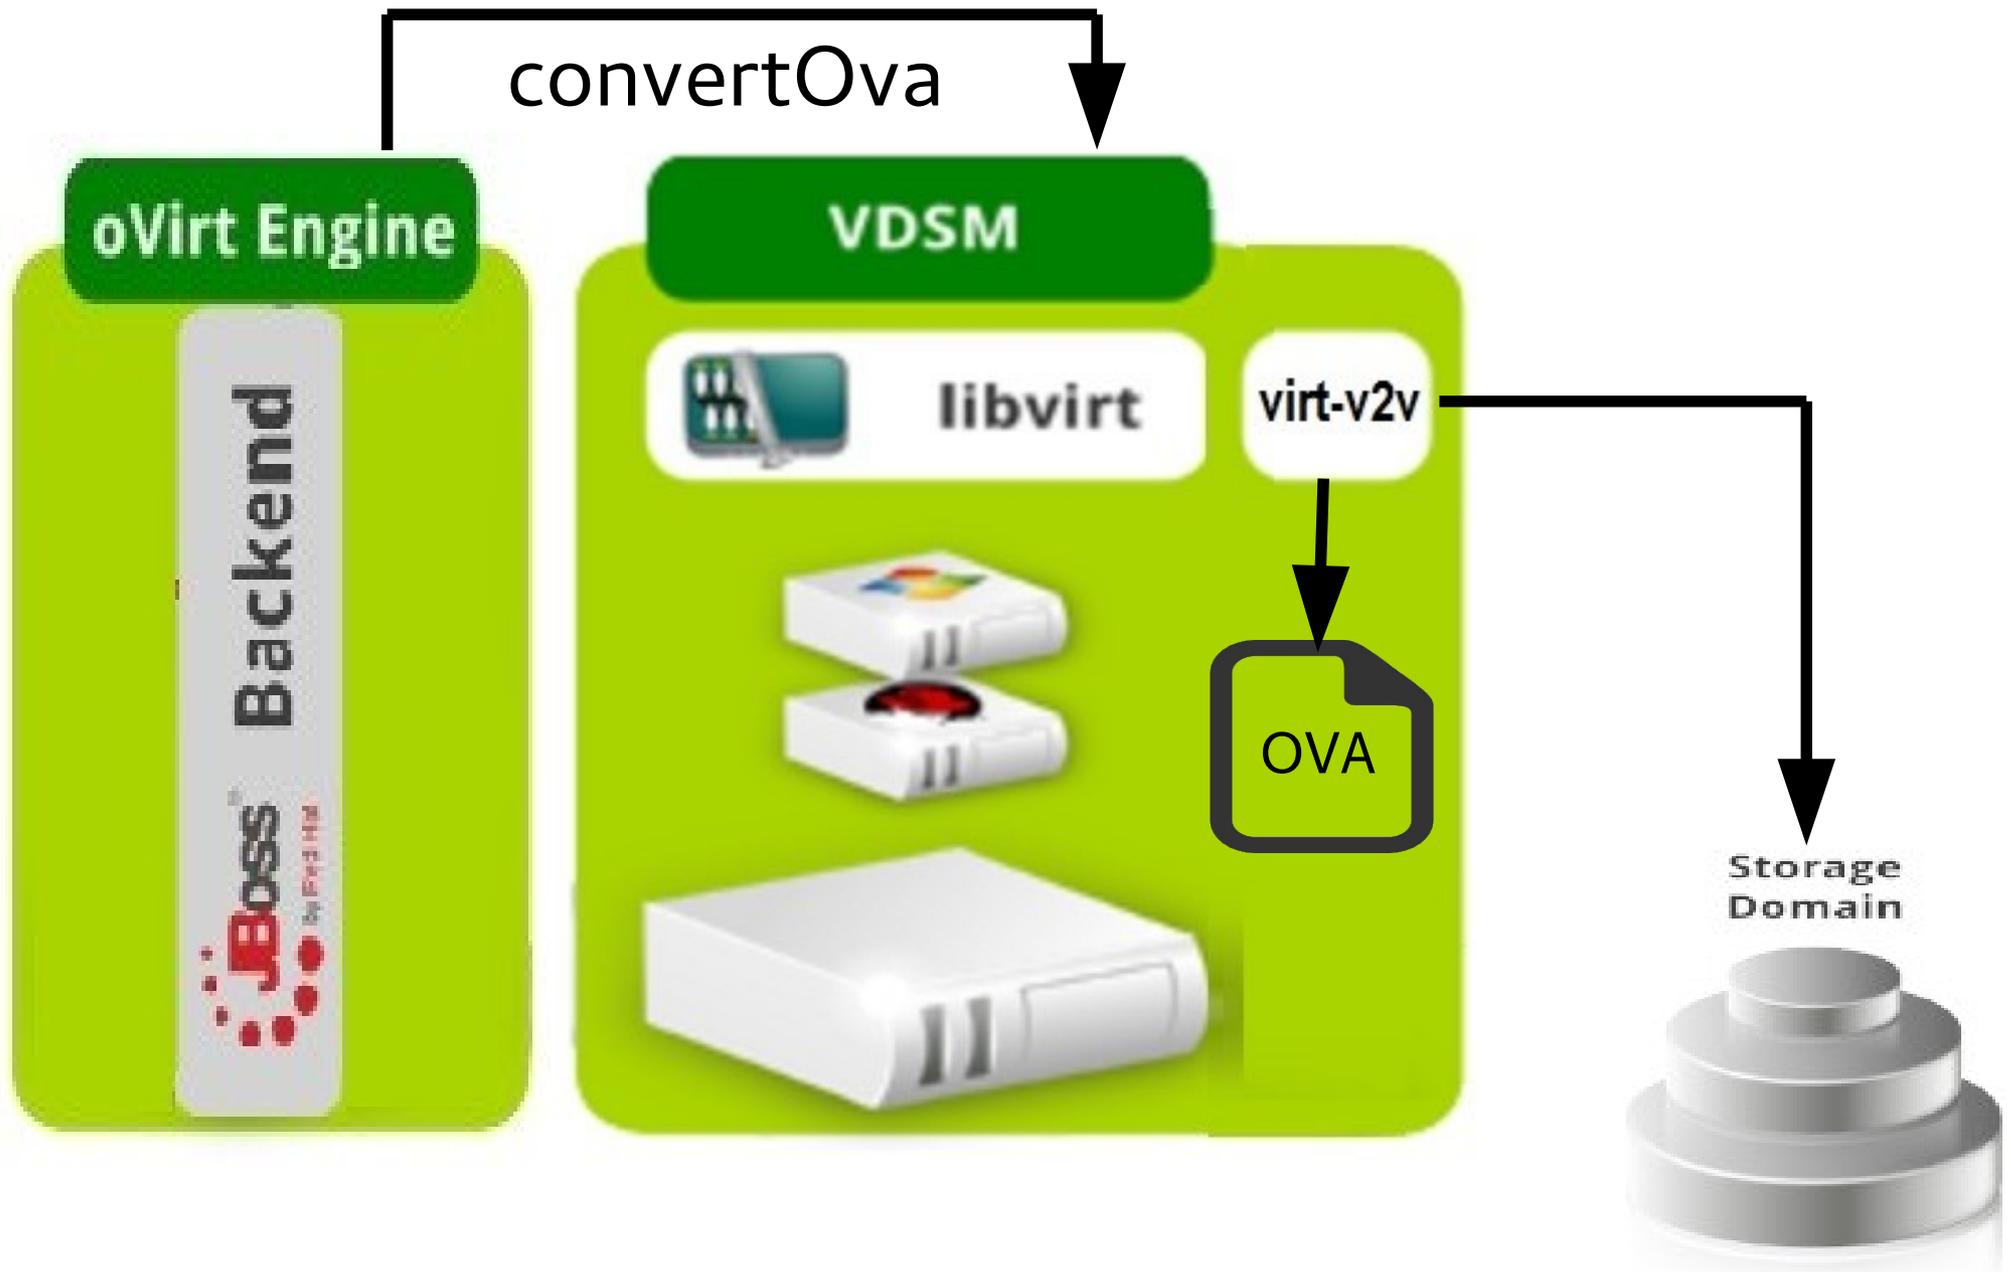

# oVirt List VM from virtual appliance (1)

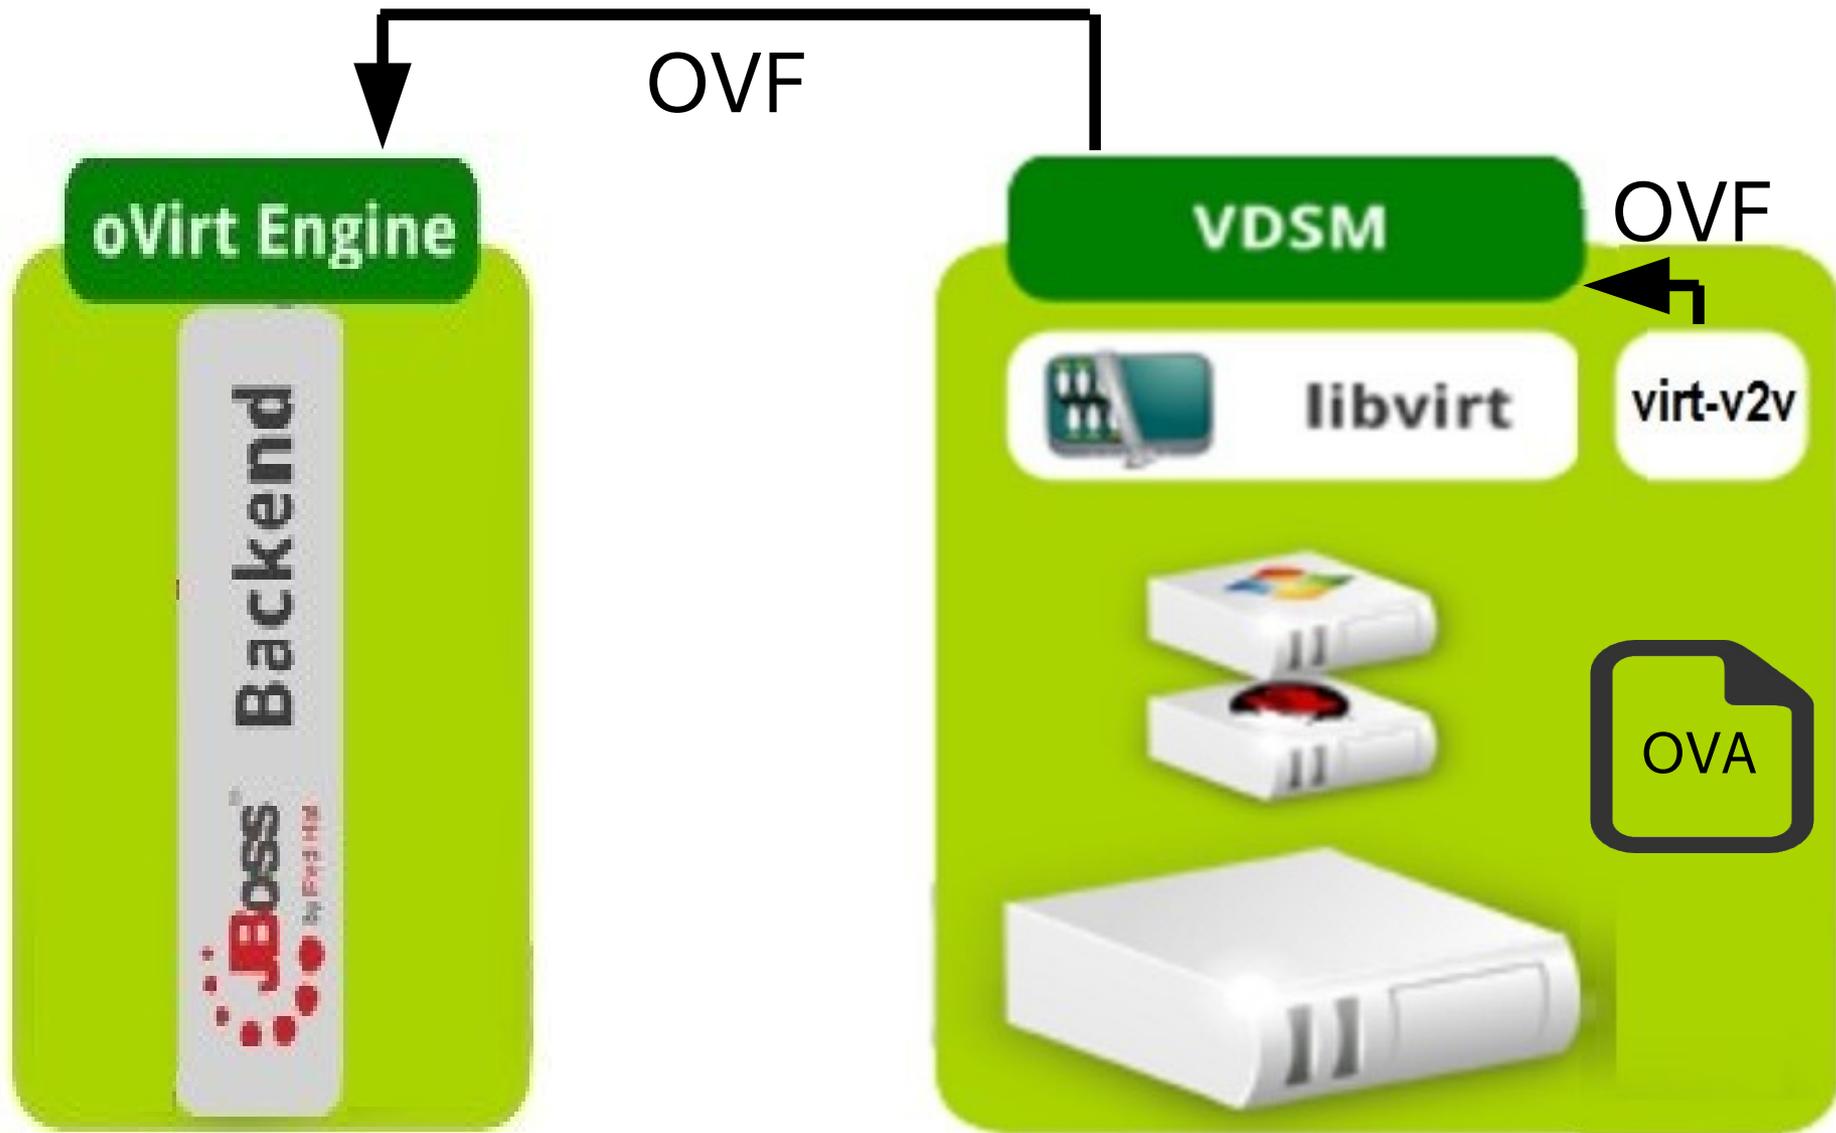

# oVirt List VM from virtual appliance (2)

# oVirt Convert VM from virtual appliance (1)

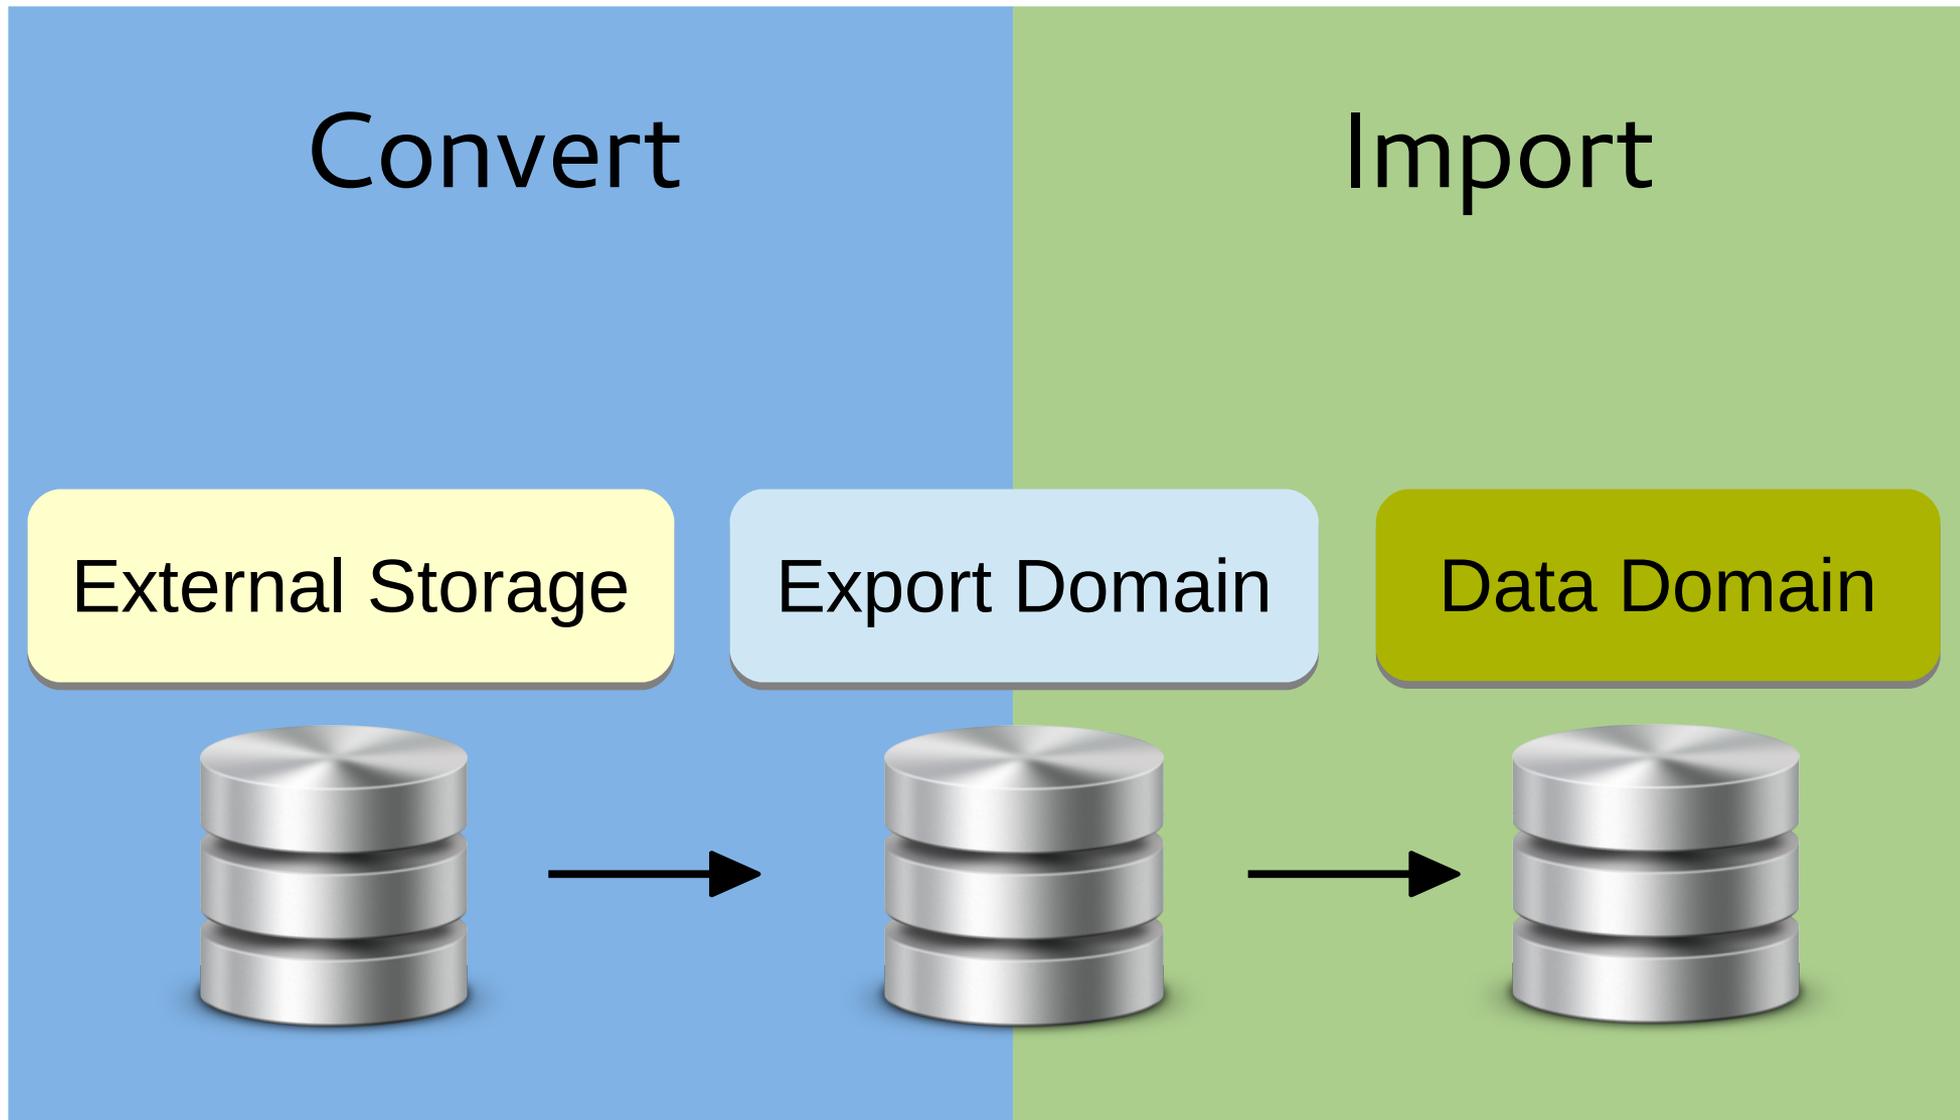

# oVirt Convert VM from virtual appliance (2)

(1) Convert  
using virt-v2v

(2) Import  
using oVirt

External Storage

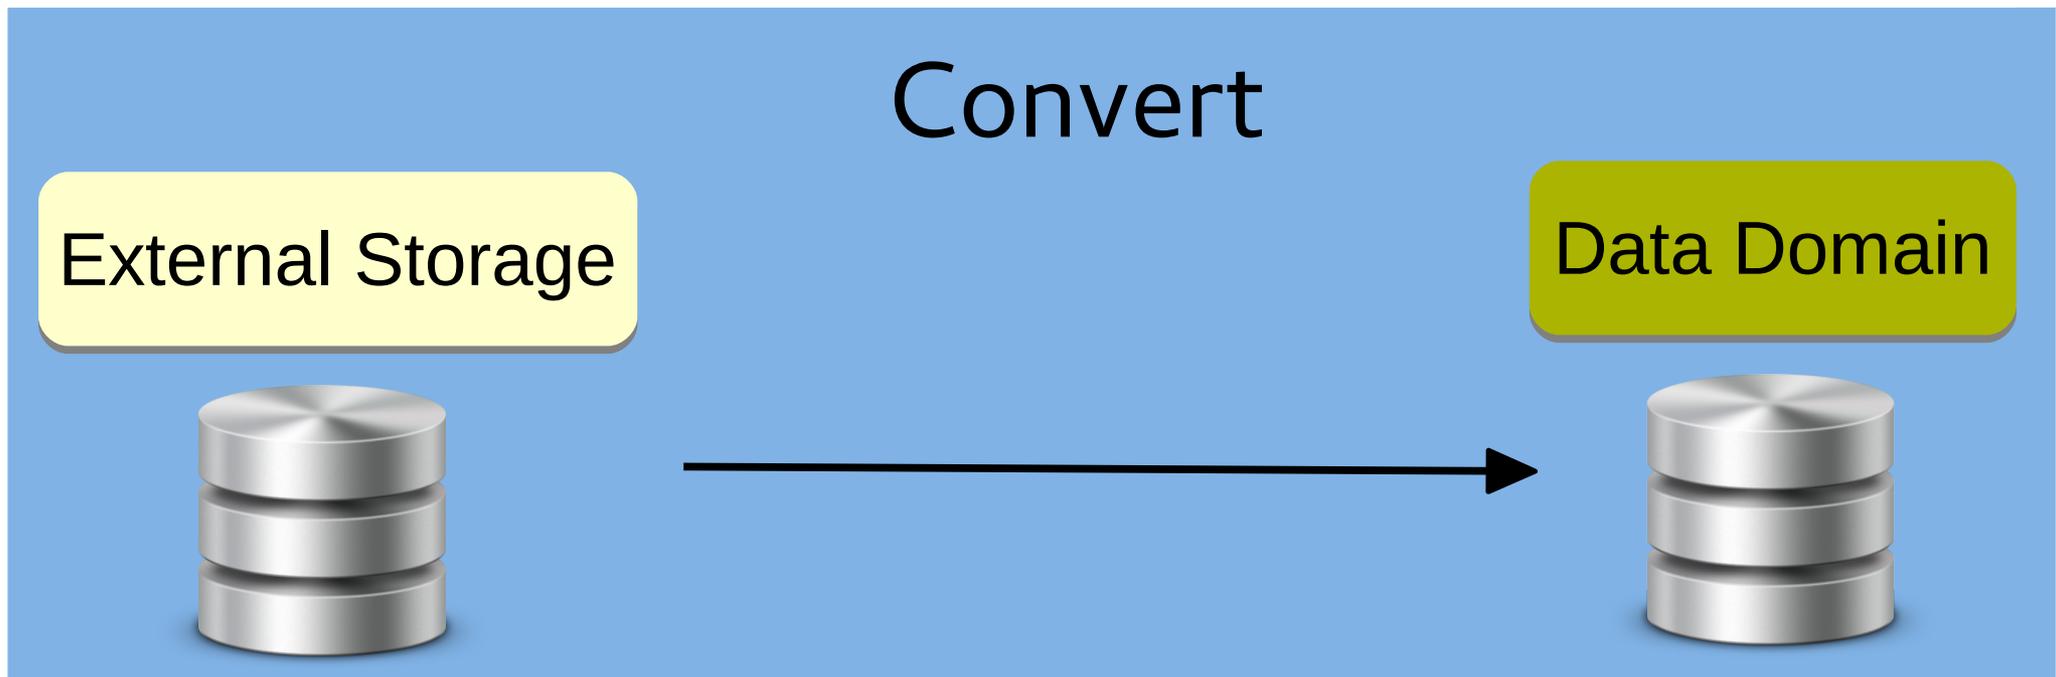

Export Domain

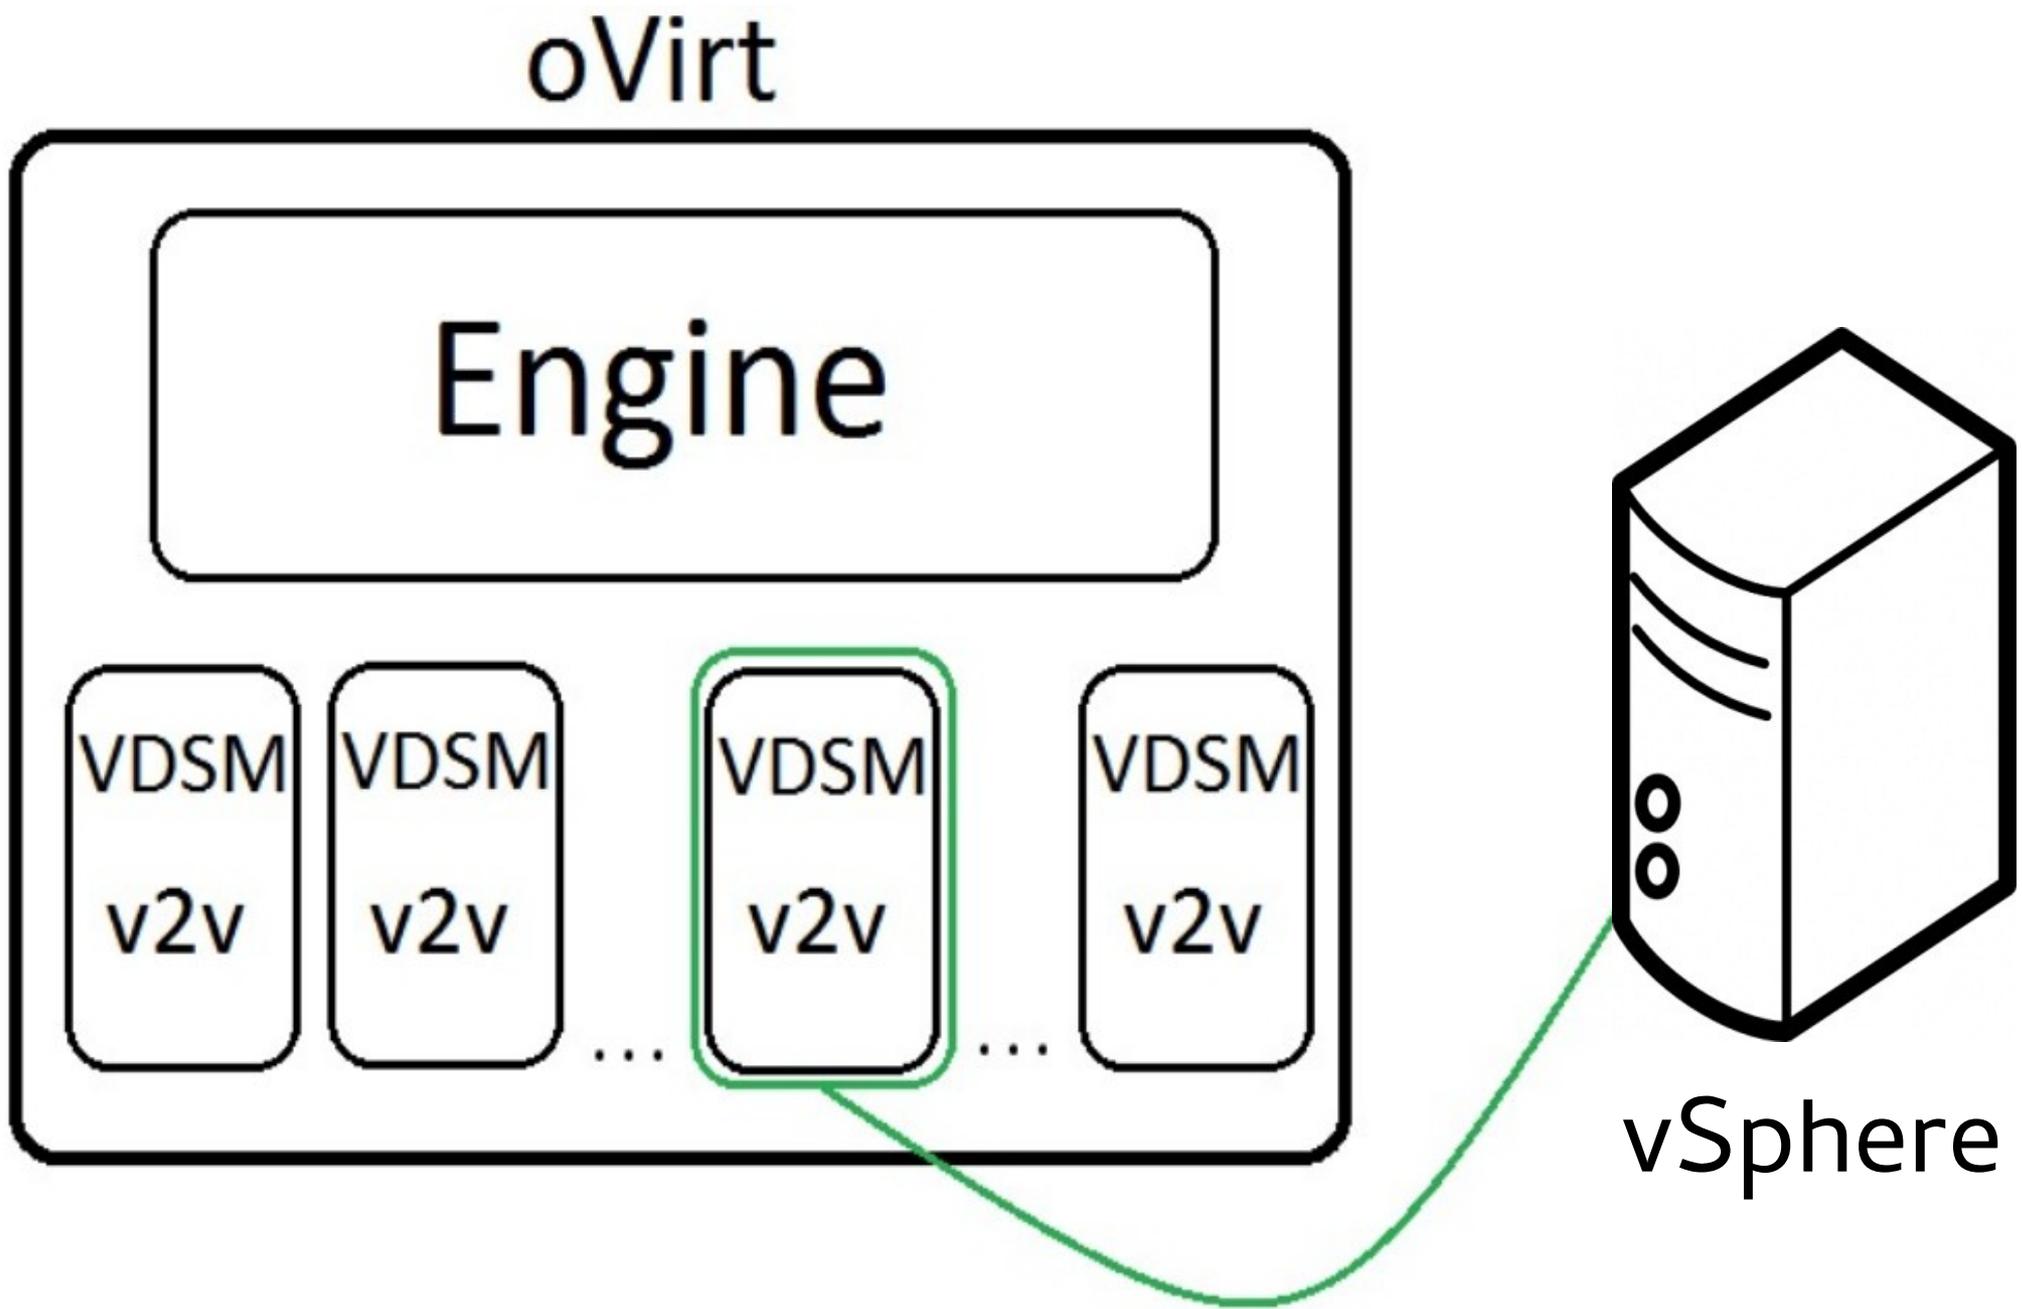

Data Domain

# oVirt Using a proxy

- Validations to prevent failures
  - Free space validation
  - Block import of running Vms
- Rollback upon conversion failure

# Demonstration

<https://www.youtube.com/watch?v=yEjckA-FriU>

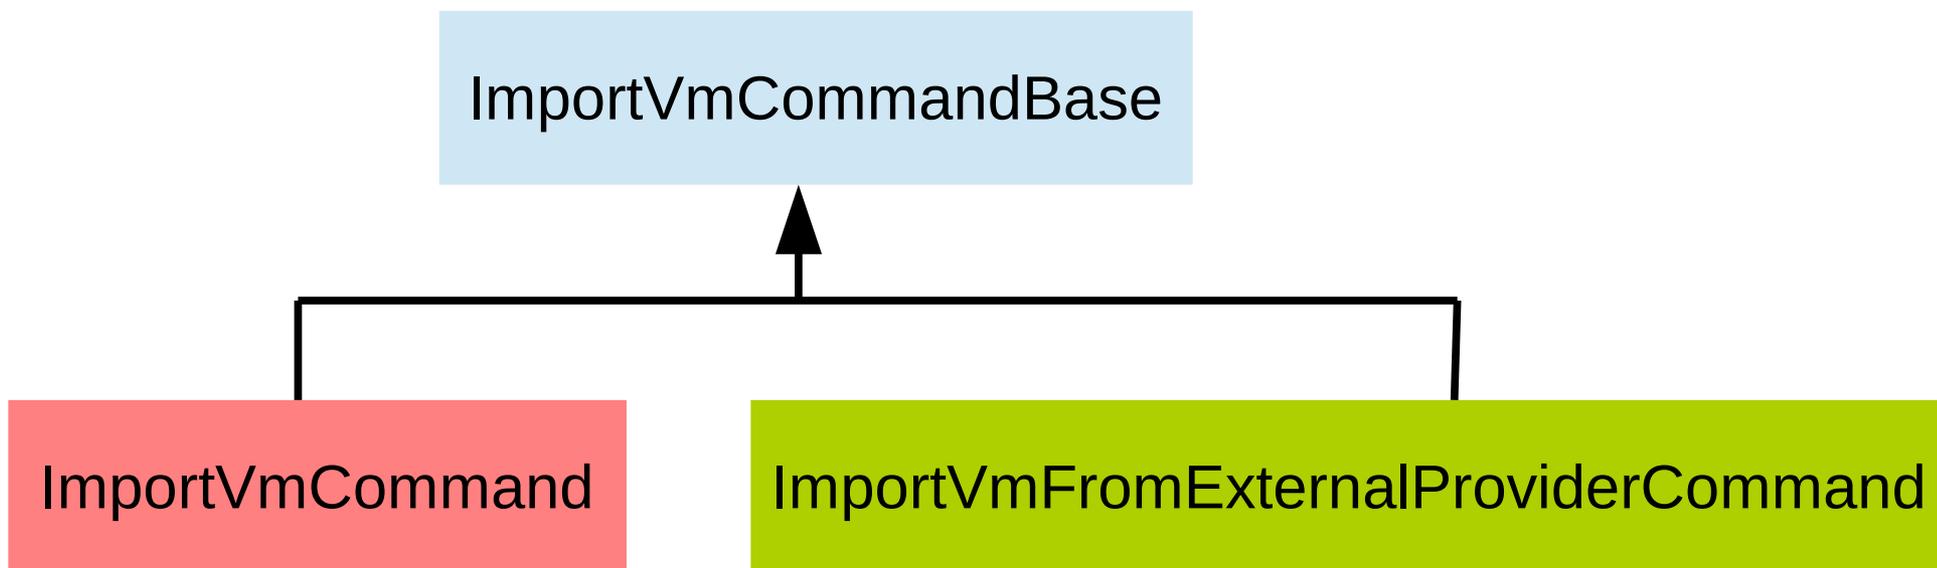

# Implementation

- Adjust virt-v2v to conversion that is managed by oVirt
- Generalize the existing import command in oVirt to support VMware & OVA as sources
  - Leverage existing functionality
  - Extensible for other sources

- Support VDSM as an output
  - Copies to given disks
  - Produce VM configuration in a given path
  - Configurable virtio-win drivers
- Support virtual appliance as a source
- Support u/s virtio-win iso

- New verbs:
  - getExternalVmList
  - convertVmFromExternalSystem
  - getConvertedVm
  - deleteV2VJob
  - abortV2VJob (In progress)
  - getOvalInfo
  - convertOva (In progress)
- Conversion progress was added to VdsStats

- List queries
  - getVmsFromExternalProviderQuery
  - getOvalInfoQuery (In progress)
- Generalize ImportVmCommand

## Import

- Adds VM to the database
- Creates disks

## Convert

- Triggers conversion in VDSM
- Registers CoCo callback
- Updates VM / Rollback

## Host Monitoring

- Receives conversion progress

- New dialog for import virtual machines
  - Supports VMware and OVA as sources
  - Also includes export domain as a source
- Progress bar for VM conversion
- VMware as a VM-provider

- Only one destination storage domain
- Host lifecycle ignores VM conversions
- Thin disks on block storage not work (bz 1221603)
- VM is not locked after engine restart (bz 1226561)
- VDSM might terminate in the middle (bz 1243935)

- Stable API for monitoring virt-v2v progress
- Enhance the API with virt-v2v
  - To support multiple destination storage domains
- Support additional import sources
  - Xen, libvirt, OVA on iso domain, physical host (P2V)
- Enhance previously used import sources
  - Add them to the new import dialog
  - Monitor their progress using a progress-bar

# THANK YOU!
